# Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

jnjuspatent@corus.jnj.com lhowd@its.jnj.com gsanche@its.jnj.com

# Application No. Applicant(s) 10/574 157 DE KOCK ET AL. Office Action Summary Examiner Art Unit Alicia L. Fierro 1626 -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS. WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status 1) Responsive to communication(s) filed on 30 March 2010. 2a) This action is FINAL. 2b) This action is non-final. 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213. Disposition of Claims 4) Claim(s) 36 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration. 5) Claim(s) \_\_\_\_\_ is/are allowed. 6) Claim(s) 36 is/are rejected. 7) Claim(s) \_\_\_\_\_ is/are objected to. 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement. Application Papers 9) The specification is objected to by the Examiner. 10) ☐ The drawing(s) filed on is/are: a) ☐ accepted or b) ☐ objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abevance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152. Priority under 35 U.S.C. § 119 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some \* c) None of: Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). \* See the attached detailed Office action for a list of the certified copies not received.

#### DETAILED ACTION

Claim 36 is currently pending in the instant application. Claims 1-35 have been cancelled
to date.

# Continued Examination

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 30, 2010 has been entered.

#### Information Disclosure Statement

3. The information disclosure statement (IDS) submitted on March 30, 2010 (reciting documents submitted on July 30, 2010) was in compliance with the provisions of 37 CFR 1.97 and 37 CFR 1.98. The IDS document was considered. A signed copy of form 1449 is enclosed herewith.

# Response to Amendments and Arguments

4. Applicant's arguments and amendments filed March 30, 2010 have been fully considered and entered into the application. All rejections not explicitly maintained herein are withdrawn. Applicants' amendments to remove the recitation of "racemic mixtures" from the claims and to amend the typographical error in the specification overcome all objections and all rejections

Application/Control Number: 10/574,157 Page 3

Art Unit: 1626

under 35 U.S.C. 112-2nd paragraph. The rejections below constitute the full set of rejections being applied to the instant claims.

#### New Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all
  obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior at are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

- 6. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
  - Determining the scope and contents of the prior art.
  - Ascertaining the differences between the prior art and the claims at issue.
  - Resolving the level of ordinary skill in the pertinent art.
  - Considering objective evidence present in the application indicating obviousness or nonobviousness.

Page 4

Application/Control Number: 10/574,157

Art Unit: 1626

- Claim 36 is rejected under 35 U.S.C. 103(a) as being unpatentable over WO 2002/083657
   A2 (Surleraux, et al.; publication date October 24, 2002) in view of Patani et al., Chem Rev.,
   1996, 96, 3147-76, further in view of Chu-Moyer et al., J. Org. Chem, 1995, 60 (17), 5721-5725
   and Van der Geest et al. (WO 2003/049746, published June 19, 2003).
- 8. The claims are drawn to a method for preparing a compound of formula (9) comprising aminating a compound of formula (6), deprotecting the resulting compound to arrive at a compound of formula (8), and coupling the compound of formula (8) with a radical R1-L to obtain the desired compound.
- Scheme I on page 43 of the '657 publication discloses compound (i-4), which is a
  compound of instant formula (6), and also details its synthesis. The compound has the following
  structure:

10. The above compound corresponds to a compound of instant formula (6) wherein PG is Boc, R2 is H, R3 is phenylmethyl, R4 is isobutyl, E is CH<sub>3</sub>, and the sulfonamide group is attached to the benzoxazole ring at the 6 position. Compound (i-4) is the exact compound as the starting material used in claim 36 (i.e. Compound 6), with the only difference being that the benzothiazole ring in the prior art is a benzoxazole ring in the instant application, which results

Application/Control Number: 10/574,157

Art Unit: 1626

in the change of the S in the ring to an O.

11. Regarding the process of making compound (9) beginning with compound (6), the '657 publication does not teach the amination of a compound of formula (6) as required by the first step in claim 21. Rather, in the '657 publication compound (i-4) which corresponds to instant formula (6) is oxidized prior to amination, and compounds (i-6) and (i-5) are aminated. However, the amination of an S-alkyl group such as S-Me is a well known nucleophilic aromatic substitution reaction. Chu-Mover et al. teach the following compounds and reactions:

entry	compd	$-NR_1R_2$	yield (%)
1	9a	}-N,	96
2	9b	}-4 -c.+.	92
3¢	9c	1-H,	91
4	9d	}−N Bo	90
5	9e	1	94
6	9f	1-N N-H	88

12. One of ordinary skill in the art would have been motivated at the time the invention was made to alter the steps of the synthesis method by directly aminating the S-Me group rather than oxidizing it first, as is taught in Scheme I. The motivation to do so is based on the fact that the reaction shown about by Chu-Moyer et al. is a well-known synthesis method, which would allow for the elimination of an extra step in the method (namely the oxidation step). The '657

Page 6

Art Unit: 1626

publication teaches that the amination step was carried out over a period of 20 hours and gave a 93% yield (page 44, lines 11 and 14), while the reaction taught by Chu-Moyer et al. was carried out for only 45 minutes, with no significant difference in yield of aminated product, as shown by the table above. The amination step in the '657 publication yields a product which corresponds to instant formula (7) wherein R8 is hydrogen and R6 is ethylpyrrolidine (aminoC<sub>1-6</sub>alkyl). Please note that because no definition of the term "amino" was given in the instant specification, the cyclic amino group (i.e. pyrrolidine) taught by the '657 publication is interpreted as reading on the broader term "amino" as claimed in the definition of R6 and R8.

- 13. Following the amination step, the '657 patent teaches the deprotection of compound (i-7) on page 44, lines 17-23, which forms a compound that corresponds with instant compound 8. Finally, compound (i-7) was reacted with 1-[[[[(3S,3aR,6aS)+(3R,3aS,6aR)-hexahydrofuro[2,3-b]furan-3-yl]oxy]carbonyl]oxy]-2,5-pyrrolidinedione, which had the effect of coupling a radical of instant formula R<sub>1</sub>-L [where L is O-C(=O) and R1 is a bicyclic heterocycle having 8 ring members] to compound (i-7) to form compound 20. Compound 20 of the '657 publication corresponds to a compound of instant formula (9).
- 14. To those skilled in the chemical art, compounds are not patentably distinct when the claimed compounds and prior art compounds have a difference of one chalcogen vs. another chalcogen. Since both O and S are chalcogens, the claimed compounds are analogues or isologues of those in the '657 publication. *Ex parte Wiseman*, 98 USPQ 277 (1953). Additionally, the instantly claimed compounds and that of the prior art are bioisosteres of one another. Patani et al. teaches that "bioisosterism represents one approach used by the medicinal chemist for the rational modification of lead compounds into safer and more clinically effective

Art Unit: 1626

agents," and further that the concept of bioisosterism is "intuitive" (page 3147, Introduction, column 1-column 2). Bioisosteric substitutions are well-known in the art. For example, O and S are isosteric (See Table 25, page 3158, compounds 52a and 52d). Case law has determined that when chemical compounds have "very close" structural similarities and similar utilities, without more a prima facie case may be made. See for example In re Wilder, 563 F.2d 457, 195 USPO 426 (CCPA 1977) (adjacent homologues and structural isomers); In re May, 574 F.2d 1082, 197 USPO 601 (CCPA 1978) (steroisomers); In re Hoch, 428 F.2d 1341, 166 USPO 406 (CCPA 1970) (acid and ethyl ester). When such "close" structural similarity to prior art compounds is shown, in accordance with these precedents the burden of coming forward shifts to the applicant, and evidence affirmatively supporting unobviousness is required. Further, as evidenced by Van der Geest et al., which discloses various structurally similar compounds as HIV protease inhibitors, it was known in the art at the time of the invention that for this particular application, benzoxazole and benzothiazole rings were chemical equivalents, expected to have the same utility and function [See, e.g., Table A, p. 43, left column, last compound (amino substituted benzoxazole) vs. p. 43, left column, third from last compound (amino substituted benzothiazole)]. Therefore the state of the art at the time of the invention was that these two ring structures were interchangeable for the purposes of the invention.

15. The instantly claimed compounds would have been prima facie obvious to one skilled in the art at the time the invention was made because one skilled in the art would have been motivated to prepare analogues or bioisosteres of the compounds taught by the '657 publication with the expectation of obtaining compounds with similar properties and utilities (namely intermediates used to produce pharmacologically active HIV protease inhibitors). Because the

Art Unit: 1626

compounds would be prima facie obvious, as determined above, the methods of making as in claim 36 would have also been prima facie obvious, as the steps and the structures of the intermediates used to make compound (9) are all exactly the same as the prior art, with the only difference being the substitution of the sulfur in the prior art for an oxygen in the instant claims in the starting material. However, this difference was known in the art at the time of the invention to be a chemical equivalent and the two ring systems are viewed as being interchangeable. Regarding the steps involved in starting with compound (6) to produce a compound of formula (9), it would have been prima facie obvious for one of ordinary skill in the art at the time the invention was made to combine the compounds and method taught by the '657 with the information on bioisosteres from Patani et al. and Van der Geest et al. to obtain compounds with similar activity, and to further combine this with the teachings on amination in Chu-Mover et al. Chu-Mover et al. shows that directly aminating an S-Me group is a known reaction which would allow for the synthesis of an aminated ring structure in less time than the method taught by the '657 publication while still obtaining a high yield of aminated product. This it would have been prima facie obvious to combine these references with a reasonable expectation of success in producing high yields of HIV protease inhibitor compounds of formula (9).

### Response to Amendments and Arguments

16. Applicants argue with the rejections inasmuch as claim 25 had not been included in the previous rejection under 103(a), so it was presumed to be allowable. However, in view of the application of new prior art to the rejection, new claim 36 is not found to be allowable over the

Art Unit: 1626

prior art for the reasons made of record above. Applicants' arguments are therefore not found to

be persuasive.

Conclusion

17. No claims are allowed.

18. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Alicia L. Fierro whose telephone number is (571)270-7683. The

examiner can normally be reached on Monday - Thursday 6:00-4:30 EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Mr. Joseph McKane can be reached on (571)272-0699. The fax phone number for

the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

...

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

like assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
